The Kitchen Renovation Checklist

Kitchen renovations can be difficult,
confusing, and can easily get out of
hand and go over budget if you
don't have a master plan.

3 Important Features

Step 1: Size of Workspace

- Note the area and square footage
- Note the placement of immovable barriers (i.e. sinks, windows, etc.)
- Note where you want to place your appliances and furniture

Step 2: Work Triangle

- Stove - Sink - Food Prep Area: make sure you have an efficient layout
- Consider where your busiest intersections of kitchen traffic will be

Step 3: Electrical Outlets

- Map out where you would like to place your appliances, so make sure to update or install new outlets
- Ensure that your outlets can handle the amount of usage they will receive in your new kitchen

Budget Questionnaire

Planning your budget before you begin renovations can save you a headache later, and some extra money. Here are the tips on what you need to do!

Project Overview

- How much money do I want to spend total on this renovation?

- What are the parts of my kitchen which I **want** to be replaced?

- What are the parts of my kitchen which **need** to be replaced most?

- What do you like about your existing kitchen that you want to keep?

- What do you dislike about your existing kitchen that you want to renovate?

- When do you want the project to start / finish?

Contractor Questionnaire

Hiring the right contractor for the job is a must! Here's how you can narrow it down.

What To Look For:

- Does the contractor listen to your requests or does he implement his own ideas?
- Is he insured? How many years has he been in business?
- Can he provide references from the last three jobs he has worked?
- Does he show up on time?
- Did he give you a fixed price quote?

Renovate!

Has this checklist helped you out? Let us know if you have any other kitchen renovation questions you need answered!
